

- 1.The design follows foreign lead fashion.
- 2.The cover of weight stack tower adopt two parts, which make the appearance looks layered, and where take esthetics and safety protection in consideration.
- 3.The different specification stronger tubes have been used to make machine perfect use, and looks coordinated, like 50*150mm flat oval/50*100mm flat oval/60mm round.
- 4.The main tube is considered as 3 mm thickness, which is stronger enough and make it competitive.
- 5.The strong magnetism pin have been used on machine, which can keep the weight adjust easy and safety.
- 6.Fully Fashioned cushion have been suitable use on machine, to keep machine long-term use and comfortable.
- 7.The high strength nylon pulley, 105mm, which can be used Industry Area.
- 8.The cable which covered by PU, the toughness and durability is great to use, can burden 1400KGF, 5.7mm
- 9.A counter can record the data of movement.
- 10.Scientific movement track can take the proper training, sufficient considering of kinematics theory.

The use of horizontal training makes the body fully supported by the thigh, abdomen, chest and elbow focus on the curl and extension training of the hind legs, which fully contract the

hamstring muscle.

Button release adjustment function can adjust the starting angle

which makes users in and out of the machine.

Specifications

DIM : (L)1750*(W)1115*(H)1500mm

N.W. : 240KG

Weight stack :

Standard : 80KG

Max : 150KG

Muscles trained : Biceps
